

Top 10 Hazards Identified by ADOSH in 2018

ADOSH has the privilege to visit with many employers throughout the year. This year, Federal Fiscal Year 2018, we visited with construction, manufacturing, services, agriculture, and public entity employers help them all improve their workplaces by identifying hazards. This article was written to help employers of all industries understand what routine hazards are present in the workplace. If you would like more information on our **free** on-site consultation program, where hazards are identified and citations are never assessed, and how we can help with training, please contact our offices.

Private Employer Hazards

1. 1910.1200(e)(1) - Hazard Communication Program
2. 1910.151(c) - Eye Wash Station
3. 1910.303(b)(2) - Listed and Labeled Equipment
4. 1926.701(b) – Reinforcing Steel
5. 1910.212(a)(1) – Machine Guarding
6. 1910.304(g)(5) – Path to Ground
7. 1926.150(c)(1)(viii) – Periodic Inspections for Fire Extinguishers
8. 1910.157(e)(2) – Monthly Fire Extinguisher Inspections
9. 1926.501(b)(4)(i) – Fall Protection around Skylights
10. 1926.404(f)(6) – Path to Ground

Public Employer Hazards

1. 1910.303(b)(2) – Listed and Labeled Equipment
2. 1910.1200(e)(1) – Hazard Communication Program
3. 1910.157(c)(1) – Fire Extinguishers Mount, Locate, and Identify
4. 1910.28(b)(3)(i) – Fall Protection around Skylights
5. 1910.305(a)(2)(ix) – General Illumination Protection
6. 1910.132(a) – Personal Protective Equipment (PPE)
7. 1910.37(b)(2) – Exits, Clearly Visible and Marked
8. 1910.151(c) – Eye Wash Station
9. 1910.212(a)(1) – Machine Guarding
10. 1910.147(c)(6)(i) – Periodic Inspections

Demo Saw used to cut Concrete

Focus on the Little Things!

There are some employers who experience little to no injuries within their workplaces throughout the year. For those that are in this category, consider yourself lucky. Many employers in riskier operations have frequent injuries that require attention, care, and a prevention strategy. Although, if you have a near-miss or first-aid event you may be missing valuable information that could prevent an injury or illness in the future.

If an employee is walking on the sidewalk and not paying attention to where he or she steps and almost trips on a raised area within the path this is classified as a near-miss. No injury occurred but there could be a good opportunity to investigate what contributed to the employee tripping on the sidewalk. This would prevent others from having the same event if something was wrong with the surface.

Another example would be where an employee scrapes his or her arm on a protruding wire from a piece of equipment. The scratch may be superficial but the employee seeks medical attention from the company's first-aid station and reports it to his or her Supervisor. This type of event should be tracked to prevent an injury from happening later. The wire may have scratched an employee now but it may cause another employee to seek medical attention beyond first-aid down the road.

Regardless if it is a near-miss or first-aid event, trending and tracking them will allow for the site safety committee, site safety professional, HR Manager, third-party risk assessor, or leadership to understand where possible hazards may be and address them immediately.

How to Comply with the Silica Standard

Over the last year ADOSH has provided articles related to Silica and how to prevent exposure to employees and employers. In addition to the articles, the ADOSH Consultation Department has been working with employers in the construction industry to identify silica exposures and sample worksites where employers used engineering controls and personal protective equipment. As of July 23, 2018, ADOSH received the written notification that the updated silica rule was adopted.

Ways to Comply:

First you and your team should discuss whether or not the standard applies to your employees. If it does not, no further action is needed. If it does apply, there are two options to consider. The first option is to use specified exposure control methods in Table 1. The second option is to use alternative methods for compliance which puts the onus on the employer to determine what additional requirements are needed to meet the standard based on the compliance method followed.

Continued on page 3

Requirement	Must the Employer Follow this Requirement?	
	If Fully and Properly Implementing Table 1	If Following Alternative Exposure Controls
PEL	No	Yes
Exposure Assessment	No	Yes, when exposures are reasonably expected to be above the action level.
Methods of Compliance	No	Yes
Respiratory Protection	Yes, if respirator use is required by Table 1	Yes, if respirator use is required to reduce exposures to the PEL
Housekeeping	Yes	Yes
Written Exposure Control Plan	Yes	Yes
Medical Surveillance	Yes, for employees who must wear a respirator under the silica standard for 30 or more days a year.	
Communication of Hazards	Yes	Yes
Recordkeeping	Yes, for any employees who are getting medical examinations	Yes, for exposures assessments and for any employees who are getting medical examinations

More Facts About the OSHA Recordkeeping Update

If you are like us at ADOSH, you probably review the OSHA Standards on a frequent basis. If not, no problem, we understand that there are many who may not review the OSHA Standards in the detail or depth that we do. With that said, we wanted to help employers remember that the Recordkeeping Standard was updated two years ago and it had information that employers should be mindful of.

An updated area within the standard are the Incentive Programs. Incentive programs have been around for some time and are implemented in ways that do not discourage employees from speaking up about hazards in the workplace. If you have an incentive program and are not sure if it would be in compliance with the Recordkeeping Standard, refer to OSHA website: <https://www.osha.gov/recordkeeping/>

If you would like to speak with an ADOSH Consultation Consultant first, contact them using either Phoenix or Tucson office numbers.

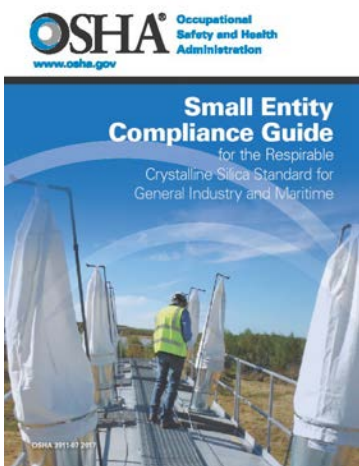

Phoenix Office: 602-542-1769
Tucson Office: 520-628-5478

Continued from page 2.

If an employer suspects Silica will be exposed to his or her employees, then an exposure control plan must be developed. Many third-party consultants and employers have developed their own template although ADOSH encourages you to use the **free** plans provided on OSHA's website. The plans will help any construction or general industry employer meet the minimum requirements of the standard. The exposure control plans can be accessed visiting the following website:

<https://www.osha.gov/dsg/topics/silicacrystalline/>

Finally, to help comply with the standard, OSHA developed a FAQ page. This website is a great source of information that we support at ADOSH. The FAQ page is located at <https://www.osha.gov/dsg/topics/silicacrystalline/>

If you are an employer who may have employees exposed to Silica and would like **free** Consultative help developing your plan, visiting your site to determine what hazards exist, or would like training on Silica please contact one of our two offices:

Phoenix: 602-542-1769
Tucson: 520-628-5478

Administrative Law Judge Division

The Industrial Commission of Arizona will be highlighting different functions of our agency in every issue of the ADOSH Advocate. This is an opportunity for employers and employees to better understand what the ICA does and what resources are available to them.

The Administrative Law Judge Division (ALJ) of the Industrial Commission of Arizona (ICA) is the administrative tribunal of the ICA where disputes over matters within the jurisdiction of the ICA are resolved. **The VISION** of the ALJ Division is to serve the citizens of Arizona (our customers) in our capacity to resolve disputes that arise in a timely, impartial and equitable manner in order to promote the health and safety of Arizona's citizens in the workplace. We strive to be transparent, accessible and accountable as an effective, efficient and responsive division of the ICA.

The **MISSION** of the ALJ Division is to resolve disputed matters in workers' compensation, youth employment and wages efficiently, impartially and equitably in matters that arise under the jurisdiction of the ICA. These matters are presided over by administrative law judges in the ALJ Division. In Fiscal Year 2018, 4,793 hearings were held and 5,568 awards/decisions were issued. There were 5,643 referrals from the ICA Claims Division.

The ALJ division has two offices, one in Phoenix, Arizona and one in Tucson, Arizona. The Phoenix office has 15 full-time judges and the Tucson office has 3 full-time judges. Administrative Law Judges are appointed by the Commission and must be licensed to practice law in the State of Arizona.

In Arizona, workers' compensation is a state constitutional right under Article XVIII -Labor Section 8 which required the legislature to enact legislation to govern workplace injuries. Arizona's compensation system is a no-fault system where neither the employee nor the employer or a co-employee can be deemed at fault. Employers limited their liability and injured workers have been able to obtain lost wages and medical care quickly so that they can be quickly returned to the workforce. A basic tenant and underlying principle of the workers' compensation system is that the burden of workplace injuries is to be placed upon industry and not on the general taxpayer.

The ALJ Division receives various types of files, some that require hearings and some that do not. Those that do not require a hearing may include motions, unassigned settlement agreements, stipulations and full and final settlements with parties that are represented.

Continued on page 5.

ADOSH Fatality Update

In the past quarter ADOSH has investigated multiple accidents that resulted in a workplace fatality. We would like all employers and employees to understand that these accidents are preventable. We provide this information to the public for general knowledge.

- An employee suffered a heart attack while applying stucco to the exterior of a new residential home.
- An employee was caught in an industrial piece of equipment.
- An employee fell through a skylight.
- An employee tripped on a step and fell.
- An employee was fatally injured while applying texture to an 8' ceiling.

VPPPA Region IX Conference

ADOSH participated in the annual VPPPA Region IX Conference in San Diego California. This year there were over 365 attendees representing more than 60 VPP Star sites and another 25 attempting the challenge.

ADOSH provided an Arizona breakout session and an update on the state of the VPP and C-VPP program. There were more than 80 attendees in the session and many wanted to know what areas of improvement they should look forward to in 2018. Incentive programs, walking working surfaces, confined space in construction, fall protection, and machine guarding were most of the items discussed.

Additionally, the attendees wanted to know how they could become more involved with the upcoming VPP audits. A list of upcoming audits were provided to all sites with Special Government Employees (SGEs) so that they may submit a candidate for consideration.

This year a special session was created for all attendees. The leadership discussion featured exemplary leaders from five VPP Star sites. They were each asked questions by a moderator and the audience. The overall experience was a great break from the normal session classes.

Continued from page 4.

Matters that require hearings include regular requests for hearing filed in the Claims Division; motions, arbitrations (Public Safety) filed; civil penalties issued by the Legal Division; issues involving minimum wage, wage claims, earned paid sick time and youth employment issues all of which emanate from the Labor Division; and requests for investigation which would require an investigation by a duty judge before referring to hearing when necessary (986 were filed in FY 18 of which 721 were referred to hearing). Of all the matters filed that are referred to the ALJ Division, at least 95% involve workers' compensation issues.

Most of the issues adjudicated by the ALJ Division and that require hearing occur during a three stage compensation process. The first stage includes temporary total disability when an injured worker is unable to return to the workplace while receiving medical care. The second stage is temporary partial disability where an injured worker may be returned to the workplace on a light duty status while undergoing medical care. The third stage is permanent disability benefits which may be provided to an injured worker after the claim is closed and those benefits are warranted for loss of earning capacity.

The hearing process can be outlined in various steps and typically commences when a party files a request for hearing in the Claims Division. Usually it is by an applicant protesting a Notice issued by an insurance carrier that covers their employer's workers' compensation matters. When that request for hearing is referred to the ALJ Division, it is randomly assigned to a presiding ALJ to schedule a hearing. That presiding ALJ is not bound by the rules of evidence or formal rules of procedure, but is charged with the duty to achieve substantial justice. The presiding ALJ makes evidentiary rulings and rulings on discovery motions as well as the ultimate decision in the matter. At the initial hearing the testimony of the applicant and any lay witnesses required is taken. At that initial hearing the parties will outline the issues to be litigated and determine the need for further hearings and the witnesses that would be required. These further hearings are usually for medical experts to testify in person or by phone with regard to the applicant's medical care, the extent of the medical care, whether the applicant is medically stationary, has a permanent impairment and whether or not there is probably a causal relationship to the industrial injury.

When all of the evidence has been presented by the parties to the administrative law judge, the matter is deemed submitted for decision and the ALJ will issue a written decision that explains both the factual and legal basis for the decision and the appeal rights that the parties have. The first appeal is a request for review to the presiding ALJ that issued the decision. If a party disagrees with that decision upon review, the party has a right to file a Special Action in the Court of Appeals, where review is mandatory. If a party disagrees with the Court of Appeals decision, then there is the option to file for review in the Supreme Court of the State of Arizona, where review is discretionary.

More information on the ALJ Division can be found on the ICA website at www.azica.gov

Prescott Safety Summit 2018

Another Successful Safety Summit in Prescott

This past quarter ADOSH Consultation and Outreach Training held a large training event in Prescott, Arizona. The event was held in partnership with the Embry-Riddle Aeronautical University where more than 80 attendees participated in the two-day event. Those who attended had an opportunity to learn from safety and health professionals who work for a safety organization or work in the private sector applying their knowledge on a daily basis. One of our guest instructors was Ms. Carly Baez who is the Director of Business Development and Membership Services for the local National Safety Council. Others included Dr. Rustin Reed with Embry-Riddle and many of our talented ADOSH staff who facilitated many classes.

This safety summit was also special as we had one of our Voluntary Protection Program participants conduct our keynote session. Several folks from Raytheon Missile Systems in Tucson, Arizona, delivered a well received session on employee engagement. Those in attendance were treated to magic and ways the Raytheon Team engages their workforce. A big thank you to Nicole Sweeney, Jodi Jundahl, and James Barrett for delivering their high impact presentation! ADOSH would like to thank Lori Burkeen, the person who contacted our offices and recommended we produce a Safety Summit in Prescott. Lori was with

the City of Prescott and is now with the City Fire Department. Lori helped to logistically plan our event and without her help it may not have happened. So, thank you Lori for the time you took out of your schedule to help make this event a success!

Raytheon's Nicole Sweeney and James Barrett engage the Prescott Safety Summit with magic cards for safety.

As a reminder, ADOSH provides these **free** safety and health education programs throughout the state. For more information on how to host or help organize a training event please contact CET Phoenix Supervisor Bryce Rucker at 602-542-5082.

The ICA and ADOSH attend the Annual National VPPPA Conference

The annual VPPPA National Conference, Safety Symposium, was attended by the ICA Chairman, Dale Schultz, and ADOSH Director, Jessie Atencio. This year's conference was in partnership with the Tennessee OSHA Governor's Safety Conference which produced one of the largest events attended in the past five years. With over 3,800 attendees from across the United States, and a few from South Africa, presentations were delivered using the VPP model.

Those that attended were greeted by vendors who specialized in safety and health training, personal protective equipment, and devices to promote a safer workplace. A total of 450 vendors were on hand to provide useful information. One product that is gaining momentum was designed to reduce Pigeon nesting and limit the exposure to their droppings.

During a break-out session, the ICA Chairman provided an ICA and ADOSH update to more than 75 employers and employees. The Chairman spoke about ways the ICA and Employers can work together to create safer worksites. He also explained some of the on going improvements at the ICA.

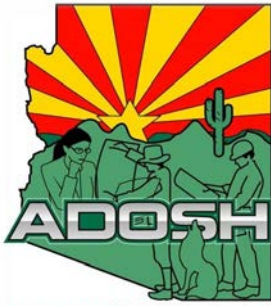

ICA Chairman Dale Schultz provides an ICA and ADOSH update to the Region IX VPPPA members.

ICA Chairman poses for a photo with four Arizona VPP Star site VPPPA National attendees. From left to right: Ryan Hubele (Johns Mansville), Allison Mendibles and Drew (MI Windows and Doors), Darin Perkins (Central Arizona Project), and Angel Delgadillo (Palo Verde Generating Station)

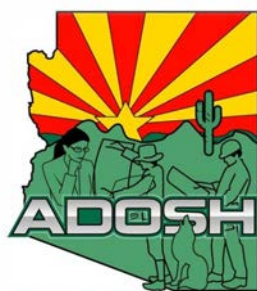

More than 3,800 attendees listen to the Department of Labor Secretary Alexander Acosta speak on the importance of collaboration and Compliance Assistance within OSHA.

ADOSH to Participate in Arizona Construction Career Days

ADOSH will be working with the Association for Construction Career Development as they, once again, gear up to host the largest construction event that reaches out to High School students throughout the state of Arizona.

The event provides an opportunity to give students a hands-on construction experience. Schools travel from all over Arizona, as far as 300 miles to attend this great event and find out more about a careers in construction. The event is comprised entirely of volunteers who have a passion for the Construction Industry and want to share it with our youth. ADOSH is one of the many volunteers who provide a booth for students to learn more about safety and how to recognize hazards in the workplace. This year's event poses to be a great one and we encourage anyone who can to be involved!

The Industrial Commission of Arizona

The Spirit of Arizona mural painting by Robert McCall

Governor Doug Ducey Visits the ICA!

Governor Ducey visited the ICA this summer to thank employees for their hard work and to discuss the ICA's deployment of the Arizona Management System (AMS). Staff had a great opportunity to show the Governor how they are implementing AMS concepts within our Huddle Boards, and how we are using AMS to better

serve our customers who rely on the ICA. During his time at the Agency, he visited three divisions. The Labor Division was the first board followed by the Special Fund Division and ADOSH's Consultation board. Once complete, the Governor and agency employees met in the auditorium followed by a question and answer session. Our Tucson ICA Office staff were able to join the visit as well being linked in using our video conferencing system. After the Governor visited with the staff, Agency Director James Ashley, presented him with a framed copy of our lobby mural, "The Spirit of Arizona", painted by Robert McCall.

You can find more pictures from the Governor's visit on page 12

Governor Ducey poses with the Robert McCall "Spirit of Arizona" framed painting and our ICA Commissioners. From left to right: Commission Scott LeMarr, Chairman Dale Schultz, Governor Ducey, Commissioner Krenzel, and Vice Chair Joseph M. Hennelly Jr.

ADOSH Director Jessie Atencio demonstrates the Consultation Tier I Huddle Board to Governor Ducey while consultants Brandon Stowell and Bruce Hanna look on.

Arizona Chapter of the National Safety Council to Revive Southwest Safety Congress

More than two years have gone by without an Arizona National Safety Council Southwest Safety Congress. This is one of the largest events in the southwest for safety, health and environmental professionals. It is designed to build awareness of the tools available to you and your organization as you continue down the path to safety excellence.

Attendees will have the opportunity to select from multiple professional and technical sessions, as well as viewing some of the newest technology in environmental health and safety products exhibited by attending vendors, manufacturers, and partners.

This year the Safety Congress will be held on October 17th at the Black Canyon Conference Center, 9940 North 25th Avenue, Phoenix, Arizona.

For more information on the Southwest Safety Conference contact Director of Business Development and Member Services, Ms. Carly Baez at 602-264-2394.

ARIZONA

CHAPTER

Region IX VPPPA “Shooting For A Starr” Safety Sum- mit set for April 2019

The annual Region IX VPPPA conference will take place in Tucson, Arizona. This event is for those employers and employees working toward the VPP Star, are already a VPP Star site, or would like to know what it takes to go above and beyond the OSHA standards and achieve the VPP Star. The conference offers an opportunity to network with other employers in the VPP program as well as learn from other site leaders on how to continuously improve safety and health management systems in the work-place.

For more information on this event please visit the following website for the Region IX VPPPA Conference:

Our Sixth C-VPP Participant and 45th VPP Site Overall

In July 2018 ADOSH had a team of Consultants and two Special Government Employees visit Brasfield & Gorrie's construction project located on the main Raytheon Missile Systems' Airport site. The company is the sixth Construction VPP participant and the first construction general contractor to successfully submit an application as part of an existing VPP site. Raytheon Missile Systems is the largest single VPP site in Arizona. Together Brassfield & Gorrie and Raytheon accomplished the onsite inspection with minimum findings. All findings were tracked and reported on in a timely manner. With the addition of Brassfield & Gorrie to the VPP program, ADOSH now maintains 45 strong Star sites across Arizona.

If your company would like more information on ADOSH's Voluntary Protection Program or any other cooperative program, contact ADOSH Director, Jessie Atencio at 602-542-5795.

ASU Del E. Webb School of Construction 2018 Safety Week

ASU will host their annual Safety Week starting on October 8—10, 2018. The week brings safety professionals into the classroom to emphasize safety in every aspect of a project. It also introduces safety as a career to students and demonstrates the various ways companies keep their workforce safe.

This year ADOSH will be working with ASU to provide a few classes at the event. We encourage all safety and health professionals to get involved with this valuable event. For more information visit their website at: <https://osha.asu.edu/page-1860949>

2018 Safety Week at Del E. Webb School of Construction

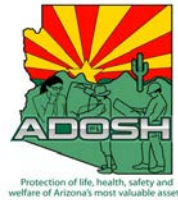

October 8 – 10, 2018

Safety Week at Del E. Webb School of Construction is an opportunity to highlight the importance of safety in every aspect of the construction industry starting in the classroom.

Safety Week brings safety professionals into the construction classroom to emphasize safety in every aspect of a project. It introduces safety as a career to students and demonstrates the various ways companies keep their employees safe. It also showcases the safety equipment available. Safety Week culminates with the 6th Annual Safety Days and the Vesting Ceremony sponsored by Bechtel, providing incoming students with their own personal protective equipment (PPE), setting a safety standard as they begin their academic career at ASU. It prepares the students with the required PPE to attend site visits and tours with their classes.

In addition to targeted safety messages in our academic courses, we offer several low-cost events open to the public. Registration is required. See below for details.
